

Litigate Like You Mean It™

Dominate in depositions through realtime collaboration & AI-driven transcripts

Leverage eDiscovery data by finding the most relevant facts instantly

Reduce the cost of litigation with a faster and more favorable resolution

Armatus™ is a module of Cloud Court's Testimony Intelligence (TI) Standard platform that augments the realtime transcription with auto-search capabilities and remote collaboration in one interface. It enables litigators to master the deposition lifecycle, from witness preparation to the deposition itself to post-deposition analysis. Armatus helps you take down – or defend and rehabilitate – your witness.

The Standard platform uses the most accurate speech-to-text technology on the market to capture deponent testimony in real time. This speech recognition is the product of advanced neural network models and millions of hours of training data. The patent-pending Armatus module augments the Standard platform with eDiscovery search

technologies to identify documents related to what your witness is saying, while they're saying it. Armatus' collaboration tools allow your colleagues to remotely (and silently) participate in depositions, sharing their knowledge and expertise with the deposing attorney in real time.

The Armatus module links highlighted testimony to the discovery documents in your case. As a witness speaks, participants highlight content in the transcript. Armatus automatically launches a search for the documents or other files that are most closely related to what your witness is saying. The deposing attorney can collaborate seamlessly with colleagues, whether in the same room or remote.

Dominate In Depositions
Prep and defend your witnesses or take down opposing witnesses

Leverage eDiscovery Production
Quickly find files relevant to live testimony

Accelerate Resolution
Reduce the cost of litigation and reach a faster and more favorable resolution

How It Works

Use Armatus to prepare for, take, and defend depositions, and to conduct post-deposition analysis. The Standard platform captures attorney questions and witness testimony via microphone and instantly displays the realtime transcript to all participants.

The Armatus module then allows authorized individuals to highlight transcript content in real time to trigger a search. Not every attorney takes a deposition in the same way. If you're operating solo, you can quickly search for and identify related documents yourself. For larger

deposition teams, Armatus enables independent searches by each person and seamless collaboration among them, whether they're sitting next to you during the deposition or located elsewhere. With respect to protective orders and cybersecurity protocols, each participant can even connect to and search a different set of eDiscovery documents.

The Standard platform's customizable dictionary enhances the accuracy of the transcription by letting you add matter-specific terms prior to a deposition.

As people speak, the Standard platform captures questions and answers in real time. Armatus enables the deposing attorney and authorized participants to highlight realtime content on the left. Armatus instantly searches a connected remote eDiscovery database with those terms. Unique search results, ranked by relevancy, instantly appear on the right, with snippets and highlighted search terms.

Clicking on a search result calls up the document viewer with your search terms highlighted. Armatus also allows remote counsel and experts to collaborate via text in real time without letting the opposition know.

Leverage Your Entire Litigation Team, Live

Your remote counsel and your experts do not require any experience in using eDiscovery software or the TI platform. The Armatus module lets all participants – litigation counsel, retained experts, or in-house counsel – share documents and communicate with each other during the deposition, essentially “crowdsourcing” depositions. Remote colleagues can quickly and easily identify key documents and craft questions that they can unobtrusively send to the questioning attorney to box in or impeach a witness, or rehabilitate one of your own.

This helps you determine whether a deponent is lying, contradicting themselves or others, or omitting key information. Then you can tailor questions to elicit testimony favorable for your case – or devastating to your opponent’s.

Master the Deposition Lifecycle

Leverage the TI platform with Armatus in all phases of the deposition lifecycle to drive better and faster resolutions. Use it to better prepare witnesses and reduce their stress before they testify in depositions or at trial. Download a rough transcript of witness prep sessions in minutes. Witnesses can reference them to

recall points raised by counsel. Litigation teams can search them to find additional documents to support or contradict points made. Ensure that corporate 30(b)(6) testimony is consistent across cases by searching across prior deposition transcripts loaded into a database linked to Armatus.

Attorneys frequently pay a premium for transcription because they need it the next day. With the TI platform, circulate a rough transcript to your team within minutes. With Armatus, highlight content in a concluded deposition, then find additional documents for your next deposition.

About Cloud Court, Inc.

Cloud Court is a LegalTech company formed by litigation professionals. Our mission is to leverage modern technology to help litigation teams reach their legal goals faster. We help our clients win difficult cases as well as cases that could go either way. We also help our clients win the cases that they should win, only earlier and on better terms. Our primary focus is testimony, with a strong emphasis on deposition testimony. Learn more at cloudcourtinc.com.

“ Ultimate excellence lies not in winning every battle, but in breaking the enemy’s resistance without fighting. ”
Sun-Tzu, The Art of War
